

Lifesaving technology. My life.

CyberKnife® Radiosurgery System

Non-invasive technology,
Lifesaver

Mike Maita

Cancer survivor and
Capital Health believer

CyberKnife® saves lives because it targets cancer with sub-millimeter accuracy, even treating tumors previously diagnosed as inoperable. Mike Maita knows firsthand that with CyberKnife®, coupled with the experience of Capital Health's radiation oncology team, he had 90% fewer visits, no pain, and no recovery time. In fact, like most Capital Health CyberKnife® patients, Mike was able to immediately return to his daily routine after treatment. Who believes Capital Health is revolutionizing cancer treatment? Mike Maita does.

Minds Advancing Medicine

One of a kind doctor led my once in a lifetime team.

Mike Maita
Cancer survivor and
Capital Health believer

John D. Lipani, MD, PhD
Surgical Director of CyberKnife® Radiosurgery
One of a kind Surgeon

Dr. Lipani is the only fellowship trained CyberKnife® neurosurgeon in the country. And Mike Maita is someone who researched cancer treatment as if his life depended on it, because it did. He considered all of his options, including receiving therapy in Philadelphia. Like Mike says, "I had one shot at this decision. I already had the best doctors and the most advanced technology right here at Capital Health with Dr. Lipani and the Capital Health radiation oncology team. With CyberKnife®, Mike would have no incision, no pain, and no recovery time. Who believes the best cancer treatment anywhere is at Capital Health? Mike and the Cancer Center physicians believe.

Minds Advancing Medicine

Strength in numbers.

da Vinci® Surgical System
Advanced micro-technology
Healer

CyberKnife® Radiosurgery System
Non-invasive technology,
Lifesaver

Capital Health is the only hospital in the region to offer the advanced technology of the da Vinci® Surgical System combined with a radiation oncology department that features state-of-the-art CyberKnife® Radiosurgery. We were the first with da Vinci® and we have the most experience with this extraordinary technology that provides our surgeons with greater precision and dexterity than they would normally have with conventional surgery. Incisions are as small as a dime, there's less pain, and less recovery time. Its partner CyberKnife® targets tumors with sub-millimeter accuracy, even treating cancer previously diagnosed as inoperable. Who believes two cancer fighting choices are better than one? We do.
